

SMART BUSINESS

The program is focussed on three key themes that are key to the future business sustainability of the wine industry. By being part of this event you will have the opportunity to hear about future trends in environmental management, and most importantly to learn from the experiences of key decision makers. The preservation of the environment and natural resources upon which

our industry depends is an essential factor for sustaining the future of the wine industry – from vineyards and wineries to global supply chains.

The FUTURES plenary session will see key industry thought leaders summarise the likely future impacts and outlook together with a range of proven and likely scenarios to secure a sustainable business future.

WATER

ENERGY

ADAPTATION

- How will climate change impact water availability, quality and cost
- Shift to a new paradigm of managing water as an asset
- How to develop regional-specific plans and solutions
- New business models for securing water assets
- The latest research in reducing wastewater treatment costs
- The Winery Energy Saver Toolkit
- Improving energy efficiency in practice
- Case studies in taking control of energy supply and demand:
 - large winery
 - small winery off-grid
- Change or move? How the wine industry makes adaptation decisions:
- practical ways of future-proofing vineyards
- Dealing with the impacts on wine processing from a changed climate
- scheduling decisions about processing
- improving intake logistics
